

Charge for the Water Tower Task Force

The task of the Water Tower Task Force is to gather information relevant to determining the future of the water tower at Mitchell Field. Based on that information, the Task Force will make a written report and recommendation(s) to the Board of Selectmen regarding the future utilization or possible demolition of the tower.

Information to be gathered will include engineering studies to determine the current condition of the water tower, whether and when work will be needed to ensure safety and what improvements, if any, are needed before the tower can be safely and practically used for one or more of the following purposes: Storage of potable or non-potable water, mounting of cell phone communications equipment or for other revenue-generating purposes. Estimates will be sought for both costs and potential revenues.

The Board of Selectmen may ask the Task Force to provide information or recommendations regarding the disposition of related structures.

Adopted at 3/31/16 Selectmen's Meeting
